

PROGETTO PE.PE E PRO.LAB

Hands-on Learning Labs are spaces and activities integrated into the curriculum, where students learn different subjects through practical experience, at a pace and in ways that better suit their individual learning styles. Organized both inside and outside school, including through partnerships with third-sector organizations and the local community, they promote inclusion, well-being, and positive relationships. Their aim is to develop communication, practical, and digital skills, independence, and self-confidence, as well as the ability to solve problems and make informed choices about the future.
